DETAILED ACTION

This is a reply to the Applicant's amendment submitted on 08/21/2006. By virtue of this amendment, claims 1-13, 18-19 and 26 are cancelled; claims 53-68 are newly added; and thus, claims 14-17, 20-25 and 27-68 are currently presented in the instant application.

Allowable Subject Matter

Reasons for Allowance

2. The following is an examiner's statement of reasons for allowance:

The closest prior art fails to disclose or fairly suggest:

a) An apparatus for adjusting a phase between two input signals, in which the first input and the second input are differential signals, in combination with the remaining claimed limitations as called for in claims 14 and 25;

b) An apparatus for controlling at least one of a first and a second adjusting circuits, in which the phase difference between the *in-phase* signal and the *quadrature-phase* signal reaches a predetermined condition, in combination with the remaining limitations, as called for in claim 33;

c) An apparatus, in which by controlling at least one of a first and a second adjusting circuits, the phase difference between the *positive* signal and the *negative* signal reaches a predetermined condition, in combination with the remaining limitations, as called for in claim 34;

d) A method, in which the step of adjusting at least one of a first variable capacitor and a second variable capacitor by respectively utilizing a first control voltage generated from the first

digital value and a second control voltage generated from the second digital value, to make the phase difference between the *in-phase* signal and the *quadrature-phase* signal reach a predetermined condition, in combination with the remaining limitations, as called for in claim 35;

e) A method, in which the step of adjusting at least one of a first variable capacitor and a second variable capacitor by respectively utilizing a first control voltage generated from the first digital value and a second control voltage generated from the second digital value, to make the phase difference between the *positive* signal and the *negative* signal reach a predetermined condition, in combination with the remaining limitations, as called for in claim 36;

f) An apparatus for adjusting a phase between two input signals, in which by controlling at least one of the first and second digital values, the phase difference between the first input signal and the second input signal is adjusted, and the first input signal and the second input signal are an in-phase and a quadrature-phase signal, respectively, in combination with the remaining claimed limitations, as called for in claim 53; and

g) A method for adjusting a phase between two input signals, in which the first input signal and the second input signal are an in-phase and a quadrature-phase signal, in combination with the remaining claimed limitations, as called for in claim 63.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
